The new flight path for turbo props taking off to the north has caused a huge increase in noise. The planes fly right over my house and keep us up. One every few minutes around 11:00pm at night. We have a group forming to address this big impact on our community. The Port took this action without any input from the public. I made a noise complaint and the Port blamed the change on the FAA. The Port has a say in airport operations and any impact on surrounding communities should be considered before such a big change. The Port needs to work with FAA, and communities to avoid impacts on the residents and without any public comment.

MIKE Dostert.
