

# Employee Security Screening Phase 2

# Employee Screening at SeaTac

- Phase 1 created 2 terminal “checkpoint” locations for screening of airport employees traversing from public to secure/ sterile areas
- Phase 2 encompasses adding airfield screening capabilities to 2 access gates to including under-vehicle video screening. *This request is for design of the buildings to house employee screeners and screening equipment*
- Phase 3 will be targeted on improvements in cargo areas

# Employee Security Screening at exterior Gates E125 and E190

Prepared by PCS Survey & Mapping Services; H:\GIS Library\Templates\MXD\Airport Fence Gates.mxd  
Date: January 20, 2017

# Screening for Airfield Gates E125 and E190

- Current state –
  1. All vehicles entering the airfield are checked for appropriate credentials (badge or under escort)
  2. Vehicles and personal belongings are subjected to a visual inspection
- Future state Phase 2 (current request) –
  1. All vehicles will receive under carriage screening via video technology
  2. All persons will have personal items x-rayed and then proceed through a walk through advanced imaging technology (AIT) to check for prohibited items

# Key points

- Project includes new TSA standard screening equipment
  - Undercarriage video monitoring and xray technology with remote viewing capabilities
  - Advanced imaging technology (AIT) walkthroughs
- Project consists of 2 ongoing costs
  - 16 FTE of represented employee screeners
  - 3 Salaried leadership positions
  - Aviation Maintenance facility upkeep and electronic technician support
