

The Sustainable Airport Master Plan (SAMP) 10 SAMPLE QUESTIONS AND RELATED SCOPING REQUESTS

Welcome to the SAMP scoping meeting! We're providing a list of sample questions – questions we certainly have for the Port of Seattle. Ask the Port personnel these, or any questions you want. We also want to make sure YOUR voice is heard. If you want the subject matter of any of *these* questions included in the scope of the environmental review, for each question we've added a related sample "scoping request." Just initial any request you want, sign at the bottom, and find QSPS volunteers will collect and provide them as a matter of public record to the Port.

QUESTION	COMMENT	SCOPE REQUEST	INITIAL
Why No Study of What's Already Happened? How does Port intend to study the human health and environmental impacts of the 97,000 new flights already added in last four years?	Four-year increase raised annual overflight total from 316,000 to 413,000.	Please include a complete assessment of the human health and environmental impacts, including from noise and emissions, resulting from the additional 97,000 aircraft overflight operations growth from the last four years.	180
Why No Study of Your Own Long-Term Plan? Why not study of the human health and environmental impacts of the Long-Term Vision anticipated to begin when capacity is reached in 2027?	SAMP Executive Summary; Port's own consultant says long term study is "key." But Port's will not be studying total growth plans for potential harms.	Please include a complete assessment of the human health and environmental impacts resulting from additional aircraft overflight operations for the Port's post-SAMP Long Term Vision projects and Century Agenda growth plans.	175
Adequate Geography? Will Port study unique human health and environmental impacts from aircraft noise and emissions, in all of the six south-end airport neighbor cities?	The Port has not committed to study all of Des Moines, Federal Way, Burien, Tukwila, Normandy Park, and SeaTac.	Please include a complete study of all of the human health and environmental impacts for all of Des Moines, Federal Way, Burien, Tukwila, Normandy Park, and SeaTac, resulting from aircraft overflights, from 2013-present; for the Near-Term Projects; and for Long Term Projects.	183
Use Current Science? Will Port review all studies from around world relating to human health and environment impacts from aircraft noise and pollution?	Studies around the world now exist on harms and potential harms from aircraft noise and emissions.	Please include all studies (worldwide) from at least the last ten years, to the extent such studies explore, find, suggest, or hypothesize any association, correlation, causation, or other potential linkage between aircraft overflights and impacts on human health or the environment.	173

Wait For Pending New Science? Why is Port proceeding without waiting for the results of the pending studies in the State of Washington directly relating to Sea-Tac Airport?	Regional studies underway, include ultra-fine particle study from UW and the airport mitigation study from Department of Commerce.	Please include a review and assessment of the results of critical Sea-Tac Airport studies now underway before proceeding with the environmental review for the SAMP.	181
Sensitive populations? Are you studying the unique impacts of aircraft noise on elderly citizens and children?	Studies have found risk of harm to elderly citizens and children from aircraft noise.	Please include a complete assessment of the unique human health impacts from noise on elderly citizens and children.	180
What About Overnight Flights? Will Port collect and assess global scientific studies relating to impacts from <i>overnight</i> flights noise?	Studies have concluded increased risk of human harm from overnight flight noise.	Please include a complete scientific study review and assessment of the unique human health impacts from noise from overnight flights.	176
Unique - Full Time 3rd Runway Use. How will Port separately assess the impacts of the full-time usage of the 3 rd Runway?	Despite historical statements, 3 rd Runway now full-time.	Please include a complete study of the unique human health and environmental impacts from the exponential increase in overflights over neighborhoods beneath and near the 3 rd Runway.	180
What if Your Projections Are Wrong? How are you accounting for the impact if your estimates of growth are too low?	SAMP Executive Summary inaccurate; est. 398,910 flights by 2019; we are at 413,000 now.	To determine the risks of error in Port projections, please include a study of the health and environmental impacts from increased aircraft operations that exceed estimated Near Term Operations.	170
Regional Airport Now? Are you studying the benefits of a regional airport?	The Port has refused to join calls for siting a regional airport now.	Please include a study of the benefits to human health and the environment in the six airport neighbor cities if growth is more fairly distributed throughout the entire region.	183

Please include the requests I have initialed above in the scope of the SAMP environmental review. Deadline for commenting September 28th 2018.

2018 SAMP OUTREACH

In 2018 the Port undertook a comprehensive public awareness campaign to update the region on the status of the Airport's Sustainable Airport Master Plan (SAMP). The campaign included formal community meetings, presentations and engagement with local governments and community leaders, informal tabling, direct mail, paid advertising, an online open house and webinar. This phase was to report out on the status of the planning, answer questions and point people to the SAMP Near-Term Projects environmental review scoping that was held between July 30 - September 28, 2018.
