WARNING: External email. Links or attachments may be unsafe.

My comments today are concerning item 7a and the Ports Century Agenda Goal 4.

How will the Port achieve its goal of reducing both direct and indirect emissions of 50% by 2030 and 80% by 2050 if it is celebrating an 11 ton GreenHouse Gas reduction met by changing light bulbs? Given annual Port emissions of 5 million tons, to achieve anything close to those GHG reduction targets I think the Port would take the reduction goals more seriously. Otherwise this is just plane greenwashing.

Thank you,
Tyrell of South Seattle
